Make every second count with high-performance OCT.

ZEISS CIRRUS 6000

www.zeiss.com/us/cirrus6000
High-Performance OCT
Advance your fast-paced practice

CIRRUS® 6000, the next-generation OCT from ZEISS, delivers high-speed image capture with HD imaging detail and a wider field of view, so you can make more informed decisions and spend more time with your patients.

**Performance OCT**
Faster imaging with greater detail, at 100,000 scans per second, for improved patient care.

**Proven analytics**
Comprehensive, clinically-validated tools to diagnose and manage a full range of conditions.

**Patient-first design**
Seamless transfer of raw patient data from previous generations of CIRRUS for continuity of patient care.
The power of 100,000 scans per second

**Faster imaging:**
Reduce chair time and speed up your practice.

- 270% faster OCT scans and 43% faster OCTA scans.*
- OCT cube scans in as little as 0.4 seconds.
- High-speed imaging in combination with FastTrac™ eye tracking technology reduces the chance of motion artifacts such as those caused by blinks and saccades.

**Greater detail:**
View more in seconds and dig deeper with high-definition imaging.

- 12x12 mm single-shot OCTA cube scan in addition to 8x8, 6x6 and 3x3 mm scans.
- High-Definition AngioPlex scans (8x8 and 6x6 mm) for even greater microvascular detail without limiting the field of view.
- 2.9 mm scan depth.

*Compared to prior generations of CIRRUS.

“The CIRRUS 6000 is all about its speed. With increased speed comes greatly improved resolution and detail on cube, raster and OCTA scans, and the new faster CIRRUS enables me to incorporate these more reliable scans into my daily workflow and make important treatment decisions for my patients.”

Theodore Leng, MD, FACS,
Byers Eye Institute at Stanford, United States
ZEISS CIRRUS 6000 empowers clinicians with a larger field of view in a single scan, and captures high-definition OCT/OCTA scans that reveal finer details of the retinal microvasculature – all of which provides more insight into the patient’s condition in less time.

Performance OCT — faster, wider, with a new level of detail

Proven analytics
CIRRUS-powered treatment decisions

As the pioneering OCT technology, the CIRRUS platform offers clinicians extensive, clinically-validated applications for retina, glaucoma and anterior segment. The result: precise analysis, faster throughput and smarter decision-making across a wide spectrum of clinical conditions and patient types.

Retina

Macular Change Analysis

The CIRRUS data cube automatically stores and delivers each patient’s historical data to provide a variety of change assessments, including macular thickness change maps that help you understand your patient’s response to treatment. Because every CIRRUS cube is tracked and registered to OCT scans from prior visits using CIRRUS’ FastTrac™ Retinal Tracking Technology, you can confidently measure point-to-point changes in macular thickness.

The CIRRUS Wellness Exam is a simple, comprehensive OU report for the efficient evaluation of the macula and optic nerve head, and is ideal for patient education.

- 10x6 mm widefield assessment of the posterior pole
- Includes macular thickness, RNFL thickness and Ganglion Cell/IPL thickness with comprehensive reference databases.
- RNFL thickness profile can now be displayed in NSTIN format, as recommended by Don Hood, PhD.*

Glaucoma

The CIRRUS suite of glaucoma analysis tools are designed to help you better visualize, detect, and manage all stages of glaucoma, from glaucoma suspects and mild glaucoma to severe glaucoma.

CIRRUS RNFL thickness deviation maps have been shown to be superior for detecting localized RNFL defects, compared to traditional peripapillary RNFL thickness measurements. Ganglion Cell Analysis helps identify macular glaucomatous damage, which can be missed with RNFL analysis alone. Combined GCL/IPL and RNFL thickness deviation maps provide a comprehensive widefield assessment.

AutoCenter™ – ZEISS® patented algorithm automatically identifies the optic nerve head using Bruch’s Membrane Opening (BMO) in 3-dimensions for more precise measurement of the neuro-retinal rim, accounting for tilted discs, disruptions to the RPE and other challenging pathology.

Combined GCA and RNFL Deviation Map

Unique to ZEISS, Guided Progression Analysis™ (GPA™) provides both trend and event-based analyses that detect statistically significant change and quantify rate of change for key RNFL, ONH, and GCL/IPL parameters.

Anterior Segment

Premier Module

CIRRUS also enables comprehensive imaging and quantification of the anterior segment for refractive surgery planning and follow-up, corneal evaluation and glaucoma assessment.

9 mm epithelial thickness map of keratoconus highlights localized epithelial thinning.

Combined GCA and RNFL Deviation Map

Anterior Segment

Premier Module

CIRRUS also enables comprehensive imaging and quantification of the anterior segment for refractive surgery planning and follow-up, corneal evaluation and glaucoma assessment.

9 mm high-definition cornea imaging with semi-automated measurement tools for flap thickness and residual stromal bed.

Patient-first design
Unique platform designed for the future

With ZEISS CIRRUS 6000, your patient data is never left behind. The CIRRUS platform ensures seamless transfer of raw, dynamic patient data from previous generations of the device – enabling clinicians to maintain continuity of patient care, even as OCT technology evolves over time.

Fundus Imaging:
- Methodology: Line Scanning Laser Ophthalmoscope (LSO)
- Optical Source: SLD 750 nm
- Field of View (degrees): 34x34

Posterior Segment scans:
- OCT: Cube scan (Macula and Optic Disc); HD Raster (1, 5, 21-Line, cross and radial); Raster scan length 3-12 mm; image averaging up to 100x 3x3, 6x6, 8x8, 12x12 mm (Macula); 4.5x5.5 mm (Optic Nerve Head); 14x10 mm (Montage), 14x14 mm (Montage)

Anterior Segment scans:
- Cube, HD Cornea, Pachymetry, HD Angle, Wide Angle-to-Angle, Anterior Chamber, 5-Line Raster

Analytical applications

Retina:
- Macular Thickness Analysis with Reference Database
- Macular Change Analysis
- Advanced MPS Analysis
- 3D Visualization
- En Face Analysis
- CIRRUS Wellness Exam

Glaucoma:
- Guided Progression Analysis
- Ganglion Cell/IPL Thickness with Reference Database
- RNFL Thickness with Reference Database
- ONH Parameters with Reference Database
- Average cup-to-disc ratio
- Average, Superior and Inferior RNFL Thickness
- CIRRUS Wellness Exam

Anterior Segment:
- 9 mm Epithelial Thickness and Pachymetry Mapping
- HD Cornea with Cornea Caliper Tool
- ChamberView® Full Anterior Chamber Imaging for phakic IOL sizing and safety distance measurements
- Angle imaging and measurement tools for Glaucoma (ADD, TISA, SSA)

Instrument Specifications

- Weight: 35 kg (77 lbs) (without monitor)
- Dimensions (L x W x H): 62.2 x 42.5 x 29.2 cm (24.4 x 16.7 x 11.4 in) (without monitor)
- Input Power: 230V, 100/120V, 50-60Hz
  - Voltage and Mains Frequency: 230V, 100/120V, 50-60Hz
  - Electrical Class: IEC 60601-1 Class I

Computer Specifications

- Monitor: 22" Widescreen HD
- Resolution: 1920x1080
- Internal storage: 2 TB with 128 GB SSD
- USB Ports: 8
- Input devices: Wireless keyboard, Wireless mouse
- Processor: Intel® Core i7 (7th Gen)
- Operating system (Instrument): Windows® 10 Enterprise
- Supported operating systems (Review Station): Windows® 10, Windows® 8.1, Windows® 7 (64 bit)
